(1) based on WLTP (Worldwide Harmonised Light-Duty Vehicles Test Procedure) static laboratory combined average city and highway cycle test, which measures energy consumption, range and emissions in passenger vehicles, designed to provide figures closer to real-world driving behaviour. Real life driving results will vary depending on driving style, type of journey, battery age and condition, use of vehicle features (such as heating and air conditioning), as well as operating, environmental and climate conditions.

(2) the charging time and driving range recovered depend on the temperature, wear of the battery, power delivered by the charging point, your driving style and your charge level.

^^ The weights indicated for towing capacities are for a basic vehicle without options. These may vary depending on your vehicle's equipment, accessories, passengers & any cargo on board. Please consult your Renault Dealership or the vehicle's owner handbook to confirm your towing requirements to ensure compliance with approved towing limits.
